SHUBHAM TAGUNDE

Full Stack .NET Developer

shubhamtagunde26@gmail.com · +91-8668932609 · LinkedIn · Portfolio

Professional Summary

Full-Stack .NET Developer with 2.5+ years of experience building business applications using C#, ASP.NET Core Web API, ASP.NET MVC, Windows Forms, ADO.NET, EF Core, SQL Server, Angular, JavaScript, and Bootstrap. Experienced in role-based workflows, procurement, booking, visitor management, learning management, and online payments. Coordinates team delivery, code reviews, Git workflows, module integration, deployment, and production support. Strong in layered architecture, REST APIs, database design, authentication, authorization, and Agile development.

Technical Skills

- **Languages:** C#, SQL/T-SQL, TypeScript, JavaScript, HTML
- **Backend:** .NET Framework, ASP.NET Core, ASP.NET MVC, Windows Forms, Web API, REST APIs, ADO.NET, EF/EF Core, LINQ
- **Frontend:** Angular, Razor Views/Partial Views/Layouts, HTML5, CSS3, Bootstrap, JavaScript, jQuery, AJAX
- **Database:** SQL Server, Stored Procedures, Views, Triggers, Joins, Transactions, Indexing, Normalization, Query Optimization
- **Architecture & Security:** OOP, SOLID, MVC, Layered Architecture, Repository Pattern, Service Layer, DI, DTOs, CRUD, RBAC, JWT, OAuth 2.0, Session Management, Exception Handling
- **Tools & Integrations:** Visual Studio, VS Code, SSMS, Git/GitHub, Postman, Swagger, IIS, Deployment, Razorpay, Google OAuth 2.0, Agile/Scrum, SDLC
- **AI Tools:** Claude, ChatGPT

Professional Experience

Techsum Technology, Pune 2024 – Present
Software Engineer

Roles and Responsibilities

- Team Leadership & Delivery: Coordinate a team of 7–8 developers on client projects; distribute tasks, track sprint progress, review code, approve Git merges, and support module integration and delivery.
- Requirements & Workflow Analysis: Analyze business requirements with clients and project leads, translate them into application workflows and technical solutions, and refine features through feedback, testing, and maintenance across the SDLC.
- Backend & API Architecture: Design, develop, and integrate scalable RESTful APIs using C#, ASP.NET Core Web API, and ASP.NET MVC, applying layered architecture, dependency injection, DTOs, and SOLID principles to keep business logic modular and maintainable.
- Web, Desktop & Frontend Development: Build dynamic ASP.NET MVC interfaces using Views, Partial Views, Layouts, Sections, and Areas; develop Windows Forms desktop screens with data-bound controls; and create responsive Angular, JavaScript, jQuery, AJAX, and Bootstrap interfaces.
- Data Access & SQL Server Development: Implement CRUD operations and business logic using ADO.NET, Entity Framework Core, and LINQ; create and maintain stored procedures, views, triggers, joins, transactions, and indexes; optimize queries to improve performance and reduce transaction latency.
- Authentication, Authorization & Enterprise Features: Implement role-based access control (RBAC), JWT authentication, and Google OAuth 2.0; apply strict CRUD permissions, data validation, localization, dynamic report generation and export, and global exception handling where required by project workflows.
- Third-Party Integrations: Integrate Razorpay payment workflows – order creation, checkout response handling, server-side signature verification, and payment-status checks – and Google OAuth 2.0 login across multiple projects.
- Testing, Debugging & Production Support: Test and document API behavior using Swagger and Postman; trace and resolve defects across frontend, API, and database layers; support IIS hosting, database migrations, deployment verification, production issue investigation, and ongoing application maintenance.
- Version Control & Agile Delivery: Manage Git/GitHub branching and merging across the team; participate in Agile/Scrum activities including sprint planning, daily stand-ups, backlog grooming, code reviews, and defect resolution.
- AI-Assisted Development: Use Claude and ChatGPT to speed up debugging, code review, and technical documentation during development.

Projects

TechAgroVista – Agro-Tourism Management System

ASP.NET Core Web API, Angular, EF Core, SQL Server, JWT, Google OAuth 2.0, Razorpay

- Developed layered ASP.NET Core Web APIs and Angular workflows for farm search, listings, pricing, availability calendars, bookings, and farm-owner revenue tracking using EF Core and LINQ.
- Integrated Razorpay order creation, payment-response handling, signature verification, and status checks before confirming bookings; added server-side availability validation to prevent conflicts.
- Implemented JWT-based API security, phone/email OTP, and Google OAuth 2.0 login; used DTOs and dependency injection to structure API interactions, and tested endpoints with Swagger/Postman.

TechProcure360 – Purchase-to-Pay Procurement System

ASP.NET Core Web API, EF Core, SQL Server, jQuery, AJAX

Role: Team Leader

- Led development of the Purchase-to-Pay workflow – Purchase Requisition, Supplier Quotation, and Purchase Order – as layered ASP.NET Core Web APIs with Controller, Service, and Repository separation.
- Built approval and status-transition logic for requisitions and quotations, including vendor/item details, pricing, discounts, GST, and quotation totals, generating purchase orders from approved quotations.
- Used EF Core and LINQ with SQL Server for procurement data, and jQuery/AJAX for dynamic forms; coordinated module integration and consistency checks across the team.

TechSocietyConnect – Housing Society Management System

ASP.NET MVC, ADO.NET, jQuery, AJAX, SQL Server

Role: Team Leader

- Led a team of 7–8 developers and coordinated role-specific workflows for Admin, Secretary, Chairman, Accountant, Security, and Resident users, each restricted to their own modules.
- Developed complaint logging, assignment and resolution tracking, notices, meetings, visitor management, financial operations, and a Chairman dashboard for reviewing society activity.
- Implemented ADO.NET data access with SQL Server stored procedures, joins, aggregate queries, and transactions; enforced server-side role authorization and supported IIS deployment.

TechLearnStack – Learning Management System

ASP.NET MVC, C#, ADO.NET, SQL Server, JavaScript, Bootstrap, Razorpay

- Developed course, learner, trainer, batch, enrollment, and training-activity modules using ASP.NET MVC Controllers, Models, and Razor Views, with validated, responsive screens.
- Integrated Razorpay course purchases – payment orders, checkout handling, and server-side signature/status verification – before updating enrollment and access state.
- Connected MVC modules to SQL Server through ADO.NET and stored procedures, with validation and exception handling for purchase and enrollment scenarios.

TsTrackVisitor – Visitor Management System

C#, Windows Forms, ADO.NET, SQL Server

- Built a desktop-based visitor management application in Windows Forms, covering visitor registration, appointment requests, administrator approval, badge issuance, host-meeting tracking, and check-out.
- Developed Receptionist and Administrator screens using data-bound WinForms controls (DataGridView, DataSet/DataTable) for watchlist/blocklist checks, staff and student attendance, and visitor history search.
- Used ADO.NET with parameterized commands, stored procedures, and transactions against a normalized SQL Server database to keep visitor and appointment records consistent, and applied class-based OOP architecture to separate UI, business logic, and data access.

Education

P.E.S. Modern College of Engineering, Ganeshkhind, Pune 2021
B.Tech in Computer Science CGPA: 6.3/10
